1 Use of Generative AI

1.1 Declaration

Task	Tool	Where?
Rephrasing and proofreading	ChatGPT	Throughout
Code checking	Claude	Throughout
Plot improvements	Claude	Throughout

1.2 Reflection

ChatGPT was used for rephrasing sentences that sounded strange by generating multiple ideas and selecting parts of those suggestions. This worked well, although the complete generated sentences could almost never be used as they were often a bit strange. Using AI for grammar checks was helpful for removing most spelling mistakes, but a human spell check was still carried out.

Claude was used for checking the written code for errors and bugs. For the errors and bugs that was found, fixes were suggest and properly explained.

Claude was used to improve the visualization of the data in the plots. This was manually checked and just helped us save some time on the visualization.
